10/12/2017 100 TOP ACTIVE DIRECTORY Interview Questions and Answers pdf 2017

Tag: 100 TOP ACTIVE DIRECTORY Interview Questions and Answers pdf

By sgatts on 7/26/17, 2017

ACTIVE DIRECTORY Interview Questions with Answers :-

1. Define what is Active Directory ?

Active Directory is a Meta Data. Active Directory is a data base which store a data base like your user information, computer information and also other network object info. It has capabilities to manage and administer the complete Network which connect with AD.

2. Define what is Active Directory Domain Services ?

In Windows 2000 Server and Windows Server 2003, the directory service is named Active Directory. In Windows Server 2008 and Windows Server 2008 R2, the directory service is named Active Directory Domain Services (AD DS). The rest of this topic refers to AD DS, but the information is also applicable to Active Directory.

3. Define what is domain ?

A domain is a set of network resources (applications, printers, and so forth) for a group of users. The user need only log in to the domain to gain access to the resources, which may be located on a number of different servers in the network. The 'domain' is simply your computer address not to confused with an URL. A domain address might look something like za.zyco.46.

4. Define what is domain controller ?

A Domain controller (DC) is a server that responds to security authentication requests (logging in, checking permissions, etc.) within the Windows Server domain. A domain is a concept introduced in Windows NT whereby a user may be granted access to a number of computer resources with the use of a single username and password combination.

5. Define what is LDAP ?

Lightweight Directory Access Protocol (LDAP) is the industry standard directory access protocol, making Active Directory widely accessible to management and query applications. Active Directory supports LDAPv2 and LDAPv3.

6. Define what is KCC ?

KCC (knowledge consistency checker) - It generates the replication topology by specifying Define what domain controllers will replicate to which other domain controllers in the site. The KCC maintains a list of connections, called a replication topology, to other domain controllers in the site. The KCC ensures that changes to any object are replicated to all site domain controllers and updates go through no more than three connections. Also an administrator can configure connection objects.

7. Where is the AD database held ? Define what other folders are related to AD DS.

By default AD data base is stored in c:\windows\ntds\NTDS.DIT. SYSVOL & NETLOGON are other folders related to AD DS.

8. Define what is the SYSVOL folder?

System Volume (Sysvol) is a shared directory that stores the server copy of the domain's public files that must be shared for common access and replication throughout a domain. The term SYSVOL refers to a set of files and folders that reside on the local hard disk of each domain controller in a domain and that are replicated by the File Replication service (FRS). Network clients access the contents of the SYSVOL tree by using the NETLOGON and SYSVOL shared folders. Dsutil uses junction points to a physical location on a hard disk that points to data that is located elsewhere on your disk or other storage device to manage a single instance store.

9. Define what is the Netlogon folder in AD DS and Define what it is used for?

The NETLOGON share is pointing to %SystemRoot%\sysvol\sysvol\{DOMAIN}\scripts folder on DC, and it's main purpose is for storing logon scripts.

http://interviewquestions.tutorialspoint.com/tag/100-top-active-directory-interview-questions-and-answers-pdf

1/7

Answer :This is the transaction log file (10 MB). All DC's in the forest share this schema and is replicated in a hierarchical fashion among them. In mixed mode, the domain features from previous versions of Windows NT Server are still enabled, while some Windows 2000 features are disabled. Answer :Kerberos V5 is the primary security protocol for authentication within a domain. Define Edb.chk? Answer :Schema is an active directory component describes all the attributes and objects that the directory service uses to store data. The deleted objects in Active Directory is stored in a special object referred as TOMBSTONE. Answer :This is the checkpoint file used to track the data not yet written to database file. What Is The List Folder Contents Permission On The Folder In Ntfs? Question 32. UDP and TCP Port 53 should be open on the proxy server or firewall. Of the sysvol folders are replicated to all domain controllers in the domain. Global groups provide access to resources in other trusted domains. Mention What Is Kerberos? Question 39. Explain What Is The Difference Between Local, Global And Universal Groups? Question 2. Answer :An active directory is a directory structure used on Micro-soft Windows based servers and computers to store data and information about networks and domains. Answer :The Kerberos V5 authentication mechanism issues tickets (A set of Schema Information in Active Directory? Answer : Windows Server, Advanced Server, Datacenter Server Minimum Disk space of 200MB for AD and 50MB for log files NTFS partition TCP/IP Installed and Configured to use DNS Administrative privilege for creating a domain in existing network Question 11. Answer :The SysVOL folder keeps the server's copy of the domain's public files. Active Directory uses this information to determine how best to use available network resources. Describe The Infrastructure Fsmo Role? Question 51. Answer :Online Defragmentation method that runs as part of the garbage collection process. Question 40. What Is Dns Scavenging? What Is Domain Controller? Replicates to all DCs within a domain. Emc Symmetrix Interview Questions Question 25. What Is Domain Information In Active Directory? We can check this using DNS MMC or nslookup command. Question 21. Question 14. Question 53. What Is Domains In Active Directory? Answer :Domain local groups assign access permissions to global domain groups for local domain resources. Answer :AD Domain Services auditing, Fine-Grained Password Policies, Read-Only Domain Controllers, Restartable Active Directory Domain Services Windows Administration Interview Questions Question 19. Mention What Is Active Directory? Answer :Enterprise Admin Group :Members of this group have complete control of all domains in the forest By default, this group belongs to the administrators group on all domain controllers in the forest As such this group has full control of the forest, add users with caution Domain Admin Group :Members of this group have complete control of the domain By default, this group is a member of the administrators group on all domain controllers, workstations and member servers at the time they are linked to the domain As such the group has full control in the domain, add users with caution Page 2 Answer :In an Active directory forest, the domain controller is a server that contains a writable copy of the Active Directory Database participates in Active directory replication and controls access to network resource. Answer :It's group policy inheritance model, where the policies are applied to Local machines, Sites, Domains and Organizational Units Question 35. Answer :ntdsutil - type roles - connections - connect servername - q - type transfer role - at the fsmo maintenance prompt - type trasfer rid master Question 50. What Is Schema Information In Active Directory? Answer : For each additional DC that is running DNS, the preferred DNS setting is the parent DNS server (first DC in the domain), and the alternate DNS setting is the actual IP address of network interface. Answer :This is the AD database and stores all AD objects. Question 4. However, this method does not shrink the Active Directory database file (Ntds.dit). Explain What Is Rid Master? LDAP naming paths are used to access AD objects and include the following: Distinguished names Relative Distinguished names Question 37. What Is Online Defragmentation In Active Directory? Question 31. Answer :In Windows 2000, a domain defines both an administrative boundary and a security boundary for a collection of objects that are relevant to a specific group of users on a network. Answer :Yes you can Connect Active Directory to other 3rd-party Directory Services such as dictionaries used by SAP, Domino etc with the help of MIIS (Microsoft Identity Integration Server). How Will You Verify Whether The Ad Installation Is Proper With Srv Resource Records? Answer :Object information for a domain. Answer :This setting designates the Windows 2000 DNS server to be a root hint server and is usually deleted. Answer :repadmin.exe /options * and use IS_GC for current domain options.ntset /dsgetdc:corp /GC Question 48. Remember, though, that it's the Administrator account, not any account that's part of the Administrators group. Define Attribute Value? What Is Replmon? A DC whose schema master role has been seized must never be brought back online. However, newly created subfolders will inherit this permission. The infrastructure FSMO role holder is the DC responsible for updating an object's SID and distinguished name in a cross-domain object reference. If you do not delete this setting, you may not be able to perform external name resolution to the root hint servers on the Internet. Usually, windows will use a 60- day tombstone lifetime if time is not set in the forest configuration. Answer :Admin\$, Drive\$, IPC\$, NETLOGON, prints and SYSVOL. Answer :Unlimited. Define Edb.log? Group Policy Interview Questions Question 28. Answer :An object's attribute is set concurrently to one value at one master, and another value at a second master. Answer :The default protocol used in directory services is LDAP (Lightweight Directory Access Protocol). It is a security boundary because each domain has a security policy that extends to all security accounts within the domain. Question 45. The only advantage to this method is that the server does not need to be taken offline for it to run. Answer :LDAP is the directory service protocol that is used to query and update AD. What Is Kerberos V5 Authentication Process? Answer :ADSI Edit is an LDAP editor for managing objects in Active Directory. The attribute values only replicates within the domain. The Kerberos V5 protocol verifies both the identity of the user and network services. Question 54. Do You Know How Kerberos V5 Works? Active Directory stores information about objects in one or more domains. Domains can be organized into parent-child relationships to form a hierarchy. Question 55. Default location is SystemRoot\ntds\NTDS.DIT. Active Directory's database engine is the Extensible Storage Engine which is based on the Jet database and can grow up to 16 TB. When EDB.LOG is full, it is renamed to EDBnmmn.log. Explain What Are Rodcs? Answer :Scavenging will help you clean up old unused records in DNS. Answer :Lingering objects can exist if a domain controller does not replicate for an interval of time that is longer than the tombstone lifetime (TSL). Answer :Forest is used to define an assembly of AD domains that share a single schema for the AD. Tell Me What Should I Do If The Dc Points To Itself For Dns, But The Srv Records Still Do Not Appear In The Zone? Answer :Verify SRV Resource Records: After AD is installed, the DC will register SRV records in DNS when it restarts. Answer :Kerberos is an authentication protocol for network. Question 30. How To View All The Gcs In The Forest? Answer :If you are able to query the ISP's DNS servers from behind the proxy server or firewall, Windows 2000 and Windows Server 2003 DNS server is able to query the root hint servers. What Is Ntdom? If this service is stopped, the computer may not authenticate users and services, and the domain controller cannot register DNS records." Question 15. Question 17. Question 59. Question 1. Why We Need Netlogon? KCC runs every 15 minutes. Answer :GPT : Group policy template GPC : Group policy container. System Administration Interview Questions Question 13. How Do I Set Up Dns For Other Dcs In The Domain That Are Running Dns? Answer :Active Directory Sites and Services allow you to specify site information. Where Is Gpt Stored? Define LedOU? Answer :For each additional DC that is running DNS, the preferred DNS setting is the parent DNS server (first DC in the domain), and the alternate DNS setting is the actual IP address of network interface. Answer :This is the AD database and stores all AD objects. Question 4. However, this method does not shrink the Active Directory database file (Ntds.dit). Explain What Is Rid Master? LDAP naming paths are used to access AD objects and include the following: Distinguished names Relative Distinguished names Question 9. A domain is an administrative boundary because administrative privileges do not extend to other domains. Explain What Is Active Directory Schema? What Is New In Windows Server 2008 Active Directory Domain Services? What Is Ldap? Answer :Components of AD includes Logical Structure: Trees, Forest, Domains and OU. Physical Structures: Domain controller and Sites. Answer :%SystemRoot%\SYSVOL\sysvol\domainname\Policies\GUID Question 29. This Active Directory tool lets you view objects and attributes that are not exposed in the Active Directory Management Console. The contents such as users, group policy, etc. Answer :CDC or child DC is a sub domain controller under root domain controller which share name space Question 18. What Is Native Mode? Nested groups are not supported in mixed mode. Explain The Term Forest In Ad? How To Transfer Fsmo Roles? Answer :NETDOM is a command-line tool that allows management of Windows domains and trust relationships Question 37. Answer :RID master stands for Relative Identifier for assigning unique IDs to the object created in AD. What Are The Advantages Of Active Directory Sites? These tickets contain encrypted data, including an encrypted password, which confirms the user's identity to the requested service. Define The Schema Master Failure? This process runs independently on every DC with a default lifetime interval of 12 hours. Question 47. What Is Ads Database Garbage Collection Process? Question 33. This dual verification is known as mutual authentication. System Administration Interview Questions Question 3. Question 56. Tell Me What If My Windows 2000 Server Is Behind A Proxy Server Or Firewall? How To Find Fsmo Roles? Question 7. Mention What Is Tombstone Lifetime? And What Are The Major Benefits Of Using Rodcs? Question 23. Universal groups grant access to resources in all trusted domains. Define Res1.log And Res2.log?

Answers. Interview Answers. Job Compare. Resume Match. Salary List. Login Sign Up. Guide: Help: Sample: Example: Ask Questions to Experts and Insiders Resume Match: LinkedIn Match: Features . A GREAT RESUME HELPS YOU GET BETTER JOBS FAST. Step 1. ... The file is not word file, and it will longer to process. Your can buy a single ... Millions of real salary data collected from government and companies - annual starting salaries, average salaries, payscale by company, job title, and city. Information for research of yearly salaries, wage level, bonus and compensation data comparison. 515 writers active. 97.12% orders delivered before the deadline. 8.5 / 10 average quality score from customers. ...
